

## “One” more reason to use PPI as your “One Stop” Metal Finisher!

Professional Plating Inc. listens. About a year ago we added a Black Oxide line based on the information we received from our customers. Today we are proud to announce the addition of a **Blasting Line**. Many of our customers have asked us for this process.

### The **Blasting Line** will complement our metal finishing processes.

- We have invested in the latest state of the art sandblasting equipment.
- This equipment can remove rust, scale and dirt and to create the perfect profile surface for metal finishing.
- We have the ability to drive directly into the blasting area. This will give us the opportunity to blast large parts.
- Parts size can range from very small to something as large as 10' X 10' X 6'.
- We use a 60 grit Aluminized Oxide media
- To determine how aggressive the finish will be we control the air pressure with excellent PSI control.

Give us the opportunity to quote your next sandblasting requirements. As always **repeatable and consistent** is the Professional Plating way. PPI your “**One Stop**” finishing shop-Where winners finish!
